FOR IMMEDIATE RELEASE

Michael G. Petera Launches VoiceViewer Technologies, Inc.

BANNOCKBURN, IL, June 1, 2004—Wyoming technology pioneer Michael G. Petera has announced the launch of VoiceViewer Technologies, Inc. (VVT). Headquartered in Bannockburn, IL, VVT is developing innovative speech-recognition tools for improving the productivity of day-to-day business processes. Petera, who holds three patents in display system technology, is serving as CEO for the new enterprise and spearheading its product-development initiatives.

Prior to founding VVT, Petera was vice president of engineering and director of advanced design concepts for Three-Five Systems, Inc., the leading U.S. manufacturer of liquid crystal display systems for mobile applications. At VVT, he is applying his experience to replacing labor-intensive, time-consuming, and redundant documentation procedures with more efficient, accurate, and intuitive processes via the VoiceViewer®, a handheld, wireless device with advanced speech-recognition capabilities.

Currently, a version of VoiceViewer is being marketed to hospitals, long-term care facilities, clinics, and physicians to facilitate the capture and documentation of patient data. The device enables caregivers to enter patient information at the point of care—simply by talking—and allows them to upload it into a computer to automatically complete forms and charts.

For more information, visit www.voiceviewer.com.
