

## Quality Patient Care Using VoiceViewer Technologies Voice Charting Software

Nurses are in short supply and there is intense pressure to provide better care with fewer resources. Shouldn't your nurses spend more time taking care of patients at the bedside than behind a computer terminal or manually completing paperwork?

Let your nurses use charting software from VoiceViewer® — a powerful set of speech-recognition tools that enable nurses and caregivers to collect patient data at the point of care simply by talking into a Smartphone. The nurse's voice is converted to text and placed into the Electronic Medical Record or the form database.

Using VoiceViewer software for daily documentation can generate cost savings worth hundreds of thousands of dollars a year. Plus, there are significant benefits to both patient morale and nurse job satisfaction.

### Nursing Savings

- Integrate nursing assessment with data recording
- Achieve 15% increase in time with patient
- Increase nursing productivity

### Cost Savings

- Eliminate overtime used for charting
- Typically five times faster than using a keyboard

### Using the Software

The nurse uses the power and capability of a Smartphone to complete all charting and transactional data. The nurse speaks the answers into the Smartphone and the text appears on the screen moments later.

Once approved by the nurse, the data is placed into the healthcare database or electronic medical record. No typing is required; the nurse handles all transactions using the Smartphone. Many "Hands-Free" modes are available. Complete, straightforward training is available.

Patient safety is enhanced because all data is input at the time that the care was provided. Because of the voice-based nature of the software, the patient can hear their

care information as it is input and they become both familiar and involved with their total care process, leading to better patient satisfaction.

Command ?
<b>Summary Note</b>
The patient is complaining of incisional pain. Medicated with 2 mg morphine IVP.
<b>Temperature (°C)</b>
36.3
<b>Temperature Site</b>
Oral
<b>Pulse Rate</b>

Command ?
Pulse Rate
72
Heart Rate
Heart Rhythm
Blood Pressure
Mean Arterial Pressure

## STEP 1

Say, "Record."  
Pause momentarily.  
Say, "Pulse Rate."

## STEP 2

The Pulse Rate answer field turns blue immediately, indicating that the system will place the answer into this location.  
Say, "Seventy Two."

## STEP 3

View your response.  
This data, after review, is placed into the EMR. The system eliminates the need to type patient data. This is done for you, automatically.

### VoiceViewer features:

- Voice-based information capture, patient becomes part of the care/recovery process
- Wireless, portable, and hands-free
- Manual data entry can also be used
- Available in multiple languages
- Voice playback to verify accuracy
- In-house training, easy and quick to learn

### VoiceViewer benefits:

- Eliminates manual, redundant data entry
- Improves nurses' efficiency, decreases the need for overtime
- Makes data capture more intuitive, less intrusive
- Supports nurses' desire for more patient interaction

### VoiceViewer specifications:

- Smartphone technology
- Touch-screen, keypad, and/or stylus-based technology for manual data entry
- WindowsMobile® and Android® compatible (BlackBerry® and iPhone® versions available in Q409)
- Data is securely transmitted to EMR or forms database after user verification
- SSL security for HIPAA compliance over cellular networks
